

Table of Contents

Declaration.....	ii
Certificate.....	iv
Abstract	vi
Acknowledgement.....	viii
1	25
Introduction	25
1.1 PURPOSE OF THE STUDY	26
1.2 BRIEF RESULTS, SCOPE AND FUTURE PROSPECTS	27
2	29
Review of Literature	29
2.1 Microtubules	29
2.2 MT-based ultrastructure: Centriole.....	33
2.2.1 Functions of the Centrosome	35
2.3 Centrosome numbers are maintained in coordination with the cell cycle.....	37
2.4 Centrosome length control	39
2.5 Centrosome role in development of Autosomal recessive primary microcephaly (MCPH).....	41
2.6 Cancer: Mechanism of development	44
2.7 Regulation of microtubules polymerization dynamics	46
2.7.1 Microtubule targeting anticancer drugs.....	47
2.7.2 MT-stabilizing anticancer drug, Paclitaxel	47
3	51
Separation of function MCPH mutations in CPAP/ CENPJ affect centriole number and length	51
3.1 Abstract.....	51
3.2 Introduction	52
3.3 Materials and Methods.....	56
3.3.1 Cell culture	56
3.3.2 cDNAs and Cloning.....	56
3.3.3 Protein expression and purification.....	57
3.3.4 Cell Transfection and synchronization	57
3.3.5 Immunofluorescence	58
3.3.6 GST-pull down assay and immunoblotting.....	58
3.3.7 Molecular Dynamics Simulations.....	59

3.3.8 MTT assay	59
3.3.9 Quantification and Statistical Analyses	60
3.4 Results and Discussions	60
3.4.1 CPAP is essential for centriole organization.....	60
3.4.2 Distinct CPAP MCPH mutations in the G-box affect different functions of CPAP at the centriole.....	62
3.4.3 CPAP MCPH mutations reduce direct interaction with STIL but differ in their centriole localization pattern	64
3.4.4 CPAP D1196N mutant reveals CEP152-dependent alternate route involved in centriole recruitment of CPAP	65
3.4.5 CPAP MCPH mutations alter bipolar spindle organization in dividing cells and reduce cell viability	71
3.5 Conclusion	72
3.6 Scientific doctoral publications related to the chapter.....	74
4	76
Identification of S-aryl dithiocarbamate derived novel antiproliferative compound exhibiting tubulin bundling	76
4.1 Abstract.....	76
4.2 Introduction	77
4.3 Materials and Methods.....	80
4.3.1 Synthesis of chemical library	80
4.3.2 Cell culture and reagents	81
4.3.3 MTT Assay	82
4.3.4 Clonogenic Assay	82
4.3.5 Cell cycle analyses by DAPI staining.....	82
4.3.6 Annexin-V/PI-based apoptotic assay	83
4.3.7 Cell cycle analyses by flow cytometry	83
4.3.8 Western Blotting	84
4.3.9 Microtubule bundling assay.....	84
4.3.10 <i>In vivo</i> tubulin fractionation assay	85
4.3.11 Molecular docking	85
4.4 Results and Discussion	86
4.4.1 Anti-proliferative activity of S-secondary alkyl dithiocarbamates in lung adenocarcinoma cells	86
4.4.2 Antiproliferative activity of S-aryl dithiocarbamates satisfy drug-likeness filters and ADMET analysis.....	87
4.4.3 Structure-activity relationship of the selected S-aryl dithiocarbamate moiety.....	92

4.4.4 Antiproliferative activity of compound 1 on different cancer types	94
4.4.5 Compound 1 induces the p53-dependent G ₂ /M cell cycle arrest and apoptosis in cervical cancer cells.....	96
4.4.6 Compound 1 induces microtubule bundling and docks at the taxol-binding pocket of the β -tubulin protein.	98
4.5 Conclusion.....	101
4.6 Scientific doctoral publications related to the chapter.....	103
5	105
Summary and Future Directions.....	105
Annexure A	109
Materials	109
A.1 Materials.....	109
A.2 Clone Maps	112
References	120
