Abstract	v
List of Publications	vii
Contents	ix
List of Figures	xi
List of Tables	xiii
	xv
Chapter 1: Introduction	1
1.1 Useful Definitions	3
1.1.1 Parameterized Complexity	3
1.1.2 Approximation	4
1.1.3 Problem Definitions	4
1.2 Previous Work	5
1.2.1 Tracking Moving Objects	5
1.2.2 Tracking Paths in Graphs	6
1.2.3 Distinguishing Vertices and Edges in Graphs	6
1.3 Our Results	7
1.3.1 TRACKING SET SYSTEMS	7
1.3.2 TRACKING SHORTEST PATHS	7
1.3.3 TRACKING PATHS	8
1.4 Organization of the Thesis	8
Chapter 2: Preliminary Definitions and Analysis	11
2.1 Notations and Definitions	11
2.1.1 Sets and Numbers	11
2.1.2 Graphs	11
2.1.3 Parameterized Complexity	12
2.1.4 Approximation Algorithms	14
2.2 Tracking Paths Premise	15
Chapter 3: Tracking Shortest Paths	17
3.1 Introduction	17
3.2 Tracking Set Systems	19
3.2.1 d -Tracking Set	19
3.2.2 Tracking Set for Set Systems	21
3.3 Tracking Set for Paths in Graphs	22
3.3.1 Tracking Shortest Paths in diameter d graphs	22
3.3.2 Improved FPT algorithm for TRACKING SHORTEST PATHS	25
3.4 Conclusions	30
Chapter 4: Preliminary Analysis of Tracking Paths	31
Chapter 5: Polynomial Kernel for Tracking Paths	37
5.1 Introduction	37
5.1.1 Notations	38
5.2 NP-completeness	38
5.2.1 Characterization of Tracking Set	40
5.2.2 Verification of Tracking Set	43
5.3 Polynomial Kernel for TRACKING PATHS	45
5.3.1 Bounding the number of vertices in \mathcal{F} with at least two neighbours in S	47
5.3.2 Bounding the number of trees in \mathcal{F}	47
5.3.3 Bounding the number of vertices in \mathcal{F} with exactly one neighbour in S	49
5.3.4 Wrapping up – Polynomial kernel and FPT algorithm	51
5.4 Conclusions	53

Chapter 6: Improved Kernel for Tracking Paths	55
6.1 Introduction	55
6.2 Analyzing structures	56
6.2.1 Vertex Disjoint Paths	57
6.2.2 Tree-sink structure	60
6.3 Quadratic Kernel for General Graphs	63
6.3.1 Bounding V_1	64
6.3.2 Bounding V_2	65
6.3.3 Bounding V_3	68
6.3.4 Bounding V_4	68
6.3.5 Final Kernel	68
6.4 Approximation for General Graphs	69
6.5 Linear Kernel for Planar Graphs	69
6.6 Parameterizing below the Upper Bound	70
6.7 Conclusions	70
Chapter 7: Structural Parameterization	71
7.1 Introduction	71
7.2 Parameterization by Dual Connected Modulator	72
7.2.1 Finding a Disjoint Tracking Set	74
7.3 Parameterization by Vertex Cover	79
7.4 Parameterization by Cluster Vertex Deletion set	80
7.4.1 Components with at least three vertices	81
7.4.2 Single vertex and single edge components	83
7.5 Conclusions	84
Chapter 8: Tracking Paths in Restricted Graph Classes	85
8.1 Introduction	85
8.1.1 Treewidth and Clique-width	86
8.1.2 Notations	86
8.2 Preliminary Analysis	87
8.3 Chordal Graphs	88
8.4 Bounded Degree Graphs	90
8.5 Reconstructing Path using a Tracker Sequence	93
8.6 Tracking Edge Set for Undirected Graphs	94
8.7 Conclusion	96
Chapter 9: Conclusions and Future Directions	97
9.1 Summary	97
9.2 Future Directions	98
9.2.1 Directed Graphs	98
9.2.2 Better FPT Algorithms	98
9.2.3 Approximation	98
9.2.4 Special Graph Classes	98
9.2.5 Dynamic Graphs	99
Bibliography	101
