Abstract	vii-viii
List of Publications	ix-xii
Contents	xiii-xv
List of Figures	xvi-xviii
List of Tables	xix
List of Symbols	xx
List of Abbreviations	xxi-xxii

Chapter 1: Introduction

1.1	Cold Plasma or Non-thermal Plasma (NTP)	1-4
1.2	Dielectric Barrier Discharges (DBDs)	4-6
1.3	Air Pollution	
1.3.1	Indoor Air Quality (IAQ)	6-7
1.3.2	Types of Indoor Air Pollutants and their Sources	7-9
1.3.3	Various Treatment Methods and Challenges Associated with These Methods	9-13
1.4	Plasma as a Tool for Sterilization	13-15
1.4.1	NTP and Heterogeneous Catalysts	15-17
1.4.2	Active Air Ions	17-18
1.4.3	Hydroxyl Radicals: Detergent of the Nature	18
1.5	Research Plan	
1.5.1	Research Gaps in Literature	19-20
1.5.2	Formulation of Research Objectives	20
1.5.3	Thesis Outline	20-22

Chapter 2: Plasma Device Fabrication, Material Synthesis, and Characterization Techniques

2.1	Introduction	25
2.2	Development of the DBD-based Plasma Sources	
2.2.1	Co-axial DBD Plasma Source	25-26
2.2.2	SDBD Plasma Source	26-27
2.3	Diagnostics Techniques	27-28
2.3.1	Voltage and Current Probes	28-29
2.3.2	Optical Emission Spectroscopy (OES)	29-30
2.3.1.1	Electron Temperature Using Line Ratio Method	30
2.3.1.2	Gas Temperature using Curve Fitting and K-type Thermocouple	30-31
2.3.3	Air Ion Counter and Hygro-thermometer	31
2.3.4	Ozone Monitor and other Probes	31
2.3.5	Hydroxyl Radical Measurement using a Chemical Probe	31-33
2.4	Material Synthesis and Characterization	

2.4.1	Synthesis of metal-oxide Nanoparticles Catalyst	33-34
2.4.2	Coating of the TiO ₂ NPs on the Aluminium Electrode	34-35
2.4.3	Characterization of synthesized TiO ₂ nanoparticles	35
2.4.3.1	X-ray Diffraction (XRD)	35
2.4.3.2	Ultra-Violet and Visible Spectroscopy (UV-Vis)	35-36
2.4.3.3	Field Emission Scanning Electron Microscopy (FESEM)	36
2.4.3.4	X-ray Photon Spectroscopy (XPS)	36
2.5	Experimental Setup for the Analysis of VOCs Degradation	37-38
2.6	Bacterial Culture Preparation and Assessment	
2.6.1	Assessment of Naturally Occurring Microorganisms	38-39
2.6.2	Assessment of Aerosolized Pathogens	39-40
2.6.3	Assessment of ESKAPE Pathogens Inactivation	40-41

Chapter 3: DBD Plasma Source for the Elimination of Naturally Occurring Microorganisms and Aerosolized Pathogens

3.1	Introduction	43-44
3.2	Experimental setup and Characterization	44-45
3.3	Experimental Observations and Analysis	
3.3.1	Electrical Characterization	45
3.3.2	Characterization of TiO ₂ Nanoparticles Catalyst and its Coating on Electrode	46-47
3.3.3	Active Air Ions and Hydroxyl Radicals	48-52
3.3.4	Assessment of Various Indoor Air Parameters	52-53
3.4	Inactivation of Naturally Occurring and Aerosolized Pathogens	53-57
3.5	Conclusion	57-58

Chapter 4: An SDBD Plasma-based Source for Efficient Degradation of VOCs in an Enclosed Environment

4.1	Introduction	61-62
4.2	Materials and Characterization Methods	62-63
4.3	Results and Discussion	
4.3.1	Characterization of SDBD Plasma Source	63-65
4.3.2	Optical Emission Spectroscopy and Plasma Characteristics	65-67
4.3.3	Quantification of •OH and O ₃	67-68
4.4	Characteristics of VOCs Decomposition	68-73
4.5	Conclusion	73-74

Chapter 5: Effect of Humidity on Plasma Discharge, Reaction Species Generation and Indoor Air Purification

5.1	Introduction	77-78
5.2	DBD-APP Source and Experimental Setup	78
5.3	Experimental Analysis and Discussion	
5.3.1	Discharge Characteristics of DBD-APP Device	79-80
5.3.2	Optical Emission Spectroscopy of DBD-APP Source	80-81
5.3.3	Estimation of Electron and Gas Temperature	82-83
5.4	TiO ₂ Characterization and Their Impact on Reactive Species Generation	83-86
5.5	Effect of Humidity on Reactive Species Generation	86-90
5.6	Room Air Disinfection	90-92
5.7	Conclusion	92-93

Chapter 6: The Role of Active Air Ions and Hydroxyl Radicals on the Eradication of ESKAPE Bacteria using Cold Plasma

6.1	Introduction	95-96
6.2	Characteristics of Power Source	96-97
6.3	Experimental Analysis and Discussion	
	6.3.1 <i>Electrical Characteristics of NE-AACP Source</i>	97-98
	6.3.2 <i>UV Intensity and TiO₂ Activation Mechanism</i>	98-99
6.4	Active Air Ions and Reactive Species	
	6.4.1 <i>Negative and Positive Air Ions</i>	99-101
	6.4.2 <i>Hydroxyl Radicals ($\bullet$OH) and Ozone (O₃)</i>	101-103
6.5	Antibacterial Properties Evaluation of NE-AACP Source	104-106
6.6	Bacterial Inactivation Mechanism	107
6.7	Conclusion	108

Chapter 7: Conclusions and Future Scope

7.1	Conclusions	111-112
7.2	Future Scopes	113

<i>References</i>	115-129
