Abstract viii
Acknowledgements x

1 Introduction **1**
1.1 Kinetics of Phase Transitions 1
1.2 Theoretical Background 4
1.2.1 Free Energy and Phase Diagram 4
1.2.2 Dynamical Models 7
1.3 Phase-Separation Kinetics of Binary Mixtures in Bulk 8
1.3.1 Morphological Characterizations: Correlation Function and Structure Factor 8
1.3.2 Growth Laws 12
1.4 Phase-Separation Kinetics of Binary Mixtures at Surfaces 16
1.4.1 Experimentally Relevant Features 17
1.4.2 Theoretical Model of Surface-Directed Spinodal Decomposition (SDSD) 19
1.4.3 Phenomenological Theory of SDSD 21
1.5 Thesis Overview 22
References 23

2 Critical Quenches Over a Flat Wall **29**
2.1 Introduction 30
2.2 Methodology 32
2.3 Result and Discussion 33
2.3.1 The Phenomenological Theory of the Wetting Layer Thickness 33
2.3.2 Molecular Dynamics Results 34
2.4 Summary 41
References 41

3 Off-Critical Quenches Over a Flat Wall **47**
3.1 Introduction 48
3.2 Simulations 50

3.2.1 Molecular dynamics (with Hydrodynamics) 50
3.2.2 Phenomenological Model (Diffusive Transport Only) 52
3.3 Results and Discussions 53
3.3.1 Phenomenoligcal Theory 53
3.3.2 Molecular Dynamics Results 54
3.4 Summary 64
References 65

4 Critical Quenches Over an Amorphous Wall 70
4.1 Introduction 71
4.2 Methodology and Numerical Details: 74
4.3 Molecular Dynamics Results 76
4.3.1 The Growth of the Wetting Layer Thickness $R_1(t)$ 78
4.3.2 Parallel and Perpendicular Length Scales 80
4.4 Summary 88
References 89

5 Critical Quenches Over a Chemically-Patterned Amorphous Wall 94
5.1 Introduction 95
5.2 Methodology and Numerical Details 97
5.3 Results 100
5.3.1 Morphological Features of Surface Registry for a Fixed Patch Size 100
5.3.2 Role of Patch Size on Surface Registry 106
5.3.3 Growth Kinetics of Surface Registry 107
5.3.4 Formation and Melting Time of Registry 108
5.4 Summary 110
References 111

6 Conclusion and Outlook 116
6.1 Conclusion 117
6.2 Outlook 119
References 121
